Systemvorstellung

Monoblockhalter „SE“ für zweischneidige Wendeschneidplatten in der Größe SE24 mit den Stechbreiten 2 bis 6 mm.

- Schneideinsätze mit EB = 2 bis 6 mm in sechs Geometrien und sechs Sorten erhältlich.
- Grundhalter 12 x 12 bis 25 x 25 mm
- Zum Einstechen, Abstechen und Kopierdrehen
- Mit und ohne ACS1-Innenkühlung (Kühlung direkt in der Schnittzone) erhältlich.
- In Einstechtiefen ET = 12 mm und ET = 21 mm

Fakten

- **Monoblockausführung**
 - Anwendungssicher, einfaches Handling – nur ein Ersatzteil
- **Aktive Wendeschneidplattenklemmung mit Fixanschlag**
 - Genaue Schneidenpositionierung im Doppelprisma – kein Herausziehen der Wendeschneidplatte möglich
- **Zweischneidige Wendeschneidplatten**
 - Hohe Wirtschaftlichkeit
- **Direkt gepresste Wendeschneidplatte mit speziellen Geometrien**
 - Kostengünstige und optimale Lösung für sichere Stechprozesse
- **Gesinterter Ausführung**
 - Die Geometrie M2 ist dabei speziell zum Einstechen-, Längs und Kopierdrehen von Stahl und rostfreien Werkstoffen konzipiert, die Geometrie T1 ist für die Bearbeitung von Stahl, rostfreiem Stahl und Gusswerkstoffen geeignet

Introduction

Monoblockholder “SE” for double sided inserts size SE24 with groove width from 2 – 6 mm

- *Inserts with groove width from 2 to 6mm with six geometries and six available grades*
- *Shank sizes from 12 x 12 to 25 x 25 mm*
- *For grooving, part-off and copy turning (-M2 geometry)*
- *Available with or without ACS1 through tool coolant (coolant straight to the cutting edge)*
- *Available in both 12mm and 21 mm groove depths*

Features

- **Monoblock design**
 - Reliable and user friendly – only one spare part
- **Active insert clamping with fixed stop**
 - Accurate insert positioning. Pulling out the insert is not possible
- **Double edged inserts**
 - High productivity
- **Directly pressed inserts with dedicated geometries**
 - Cost efficient and optimum solution for reliable groove production
- **Ground version**
 - First choice for grooving and turning
- **Main application for steel and stainless steel**
- **Strong cutting edge for maximum feed rates and cutting depths**

Descrizione

Steli monoblocco “SE” per inserti bitaglienti dimensione SE24
in larghezze da 2 a 6 mm

- Inserti con larghezze da 2 a 6mm con 6 geometrie e 6 qualità di metallo duro
- Steli da 12 x 12 fino a 25 x 25 mm
- Per scanalatura, troncatura e scanalatura di copiatura (Geometria -M2)
- Disponibile con ACS1 ed senza refrigerazione interna (ACS permette il refrigerante direttamente al punto di taglio)
- Disponibile per le profondità di gola 12 mm e 21 mm

Caratteristiche

- **Monoblocco**
 - Sicuro e di semplice utilizzo – senza ricambi
- **Bloccaggio assiale con fermo**
 - Posizionamento preciso e sicuro dell' inserto impossibile lo spostamento in sede
- **Bi-tagliente**
 - Economico
- **Inserti con geometrie specifiche**
 - Forme specifiche per materiali e per una lavorazione affidabile
- **Versione sinterizzato**
 - Prima scelta per la scanalatura e tornitura longitudinale Principale applicazione su acciaio e acciai inossidabili Geometria robusta per massima velocità di avanzamento e profondità di taglio

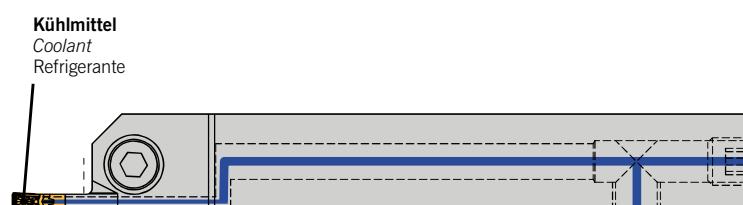

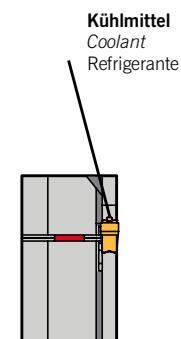

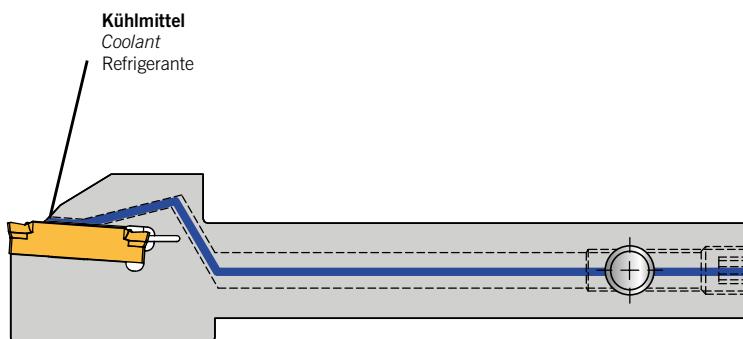

ARNO-ACS cooling system®

Patentierte Kühlung durch Unterspülung

Coolant under the swarf

Refrigerante sotto il truciolo

ACS1

Neue Technologie für Stechmodule, Klingen und Monoblockhalter. Spezielles Kühlungssystem sichert die Unterspülung des Spanes und verbessert Standzeiten deutlich.

Bisher gibt es am Markt externe sowie interne Kühlungsvarianten, die jedoch oft einen erheblichen Streuungsverlust bis zur Schneidkante aufweisen. Besonders bei tieferen Ein- und Abstichen reduziert sich dadurch der Kühlungseffekt enorm und der Abtransport der Späne wird erschwert.

ARNO®-Werkzeuge hat diese Probleme erkannt und mittels neu entwickelter Technik, dem ARNO-ACS cooling system® (ACS), erfolgreich beseitigt. Dieses innovative System ermöglicht die optimale Kühlung der Stechplatte während der Bearbeitung. Es stehen zwei Kühlvarianten zur Verfügung: ACS1 mit einem Kühlmittelkanal sowie ACS2 mit zwei Kühlmittelanälen.

New technology for modules, blades and monoblock holders. The special coolant system ensures the flow is directed under the swarf and thereby improves tool life considerably.

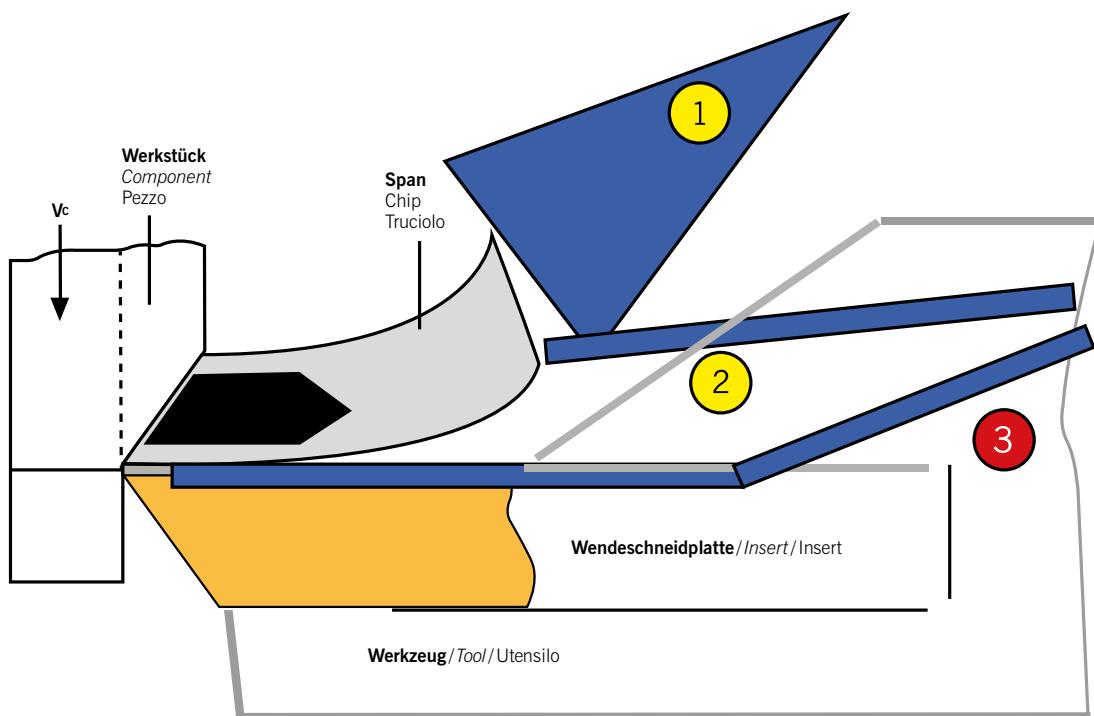

The market place has already seen many coolant variations which often loses much of efficiency due to poor accuracy from the spray jet to the cutting edge and especially in applications with a deeper groove depth the desired coolant effect and swarf evacuation suffers from only little or no improvement.

ARNO®-Werkzeuge has realised this problem area and by developing the ARNO®-Cooling-System (ACS) solved the problem. This innovative design ensures optimum coolant to the cutting edge during machining. It comes in two variations: ACS1, with one coolant hole and ACS2 with two coolant holes.

Nuova tecnologia per moduli, lame e steli integrali. Lo speciale passaggio del refrigerante assicura di raggiungere il punto più vicino possibile alla zona di taglio riducendo le temperature e incrementando la vita inserto considerevolmente.

Il mercato offre oggi innumerevoli sistemi di adduzione che però perdono la loro efficienza con la distanza dal punto di taglio o per la bassa precisione del getto. Nei casi di gole molto profonde questo ha un significato importantissimo anche per una migliore evacuazione truciolo.

ARNO®-Werkzeuge ha identificato queste problematiche e su queste focalizzato la ricerca e sviluppo che con il nuovo sistema di refrigerazione ARNO® ACS ha eliminato con successo. Questo sistema innovativo consente un raffreddamento ottimale del tagliente, degli utensili e del materiale durante la lavorazione. Due sono le opzioni di raffreddamento disponibili: ACS1 con un solo canale di refrigerazione e ACS2 con due canali di refrigerazione.

- 1** „Externe Kühlung“ über Düse / External coolant from coolant jet / Refrigerazione "estesa" dei sistemi tradizionali (su truciolo)
- 2** „Interne Kühlung“ über Halter oder Spannpratze / Through tool coolant / Refrigerazione direzionale tramite adduzioni interne classiche (su truciolo)
- 3** Neue „ACS-Kühlung“ direkt durch den Plattsitz / New ACS-coolant through the insert seat / Nuovo ACS ARNO-Cooling-System direttamente sul filo tagliente

ARNO-ACS cooling system®

Gegen zu hohe Temperaturen an der Schneide

Solving the problem of high temperatures at the cutting edge

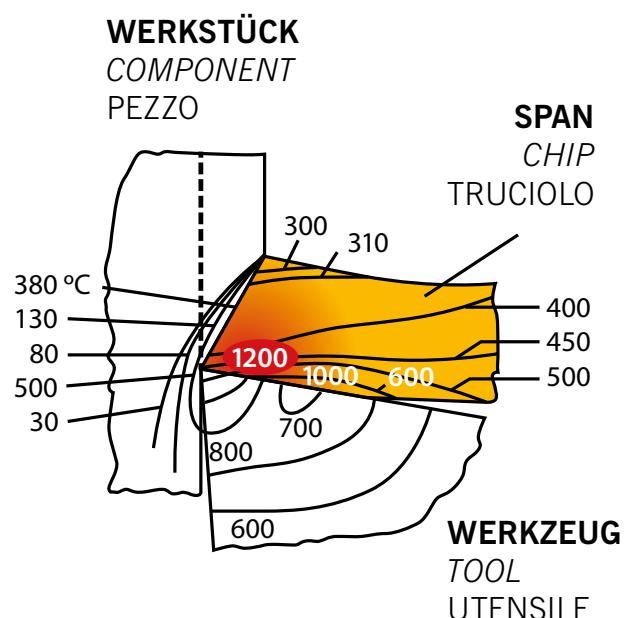

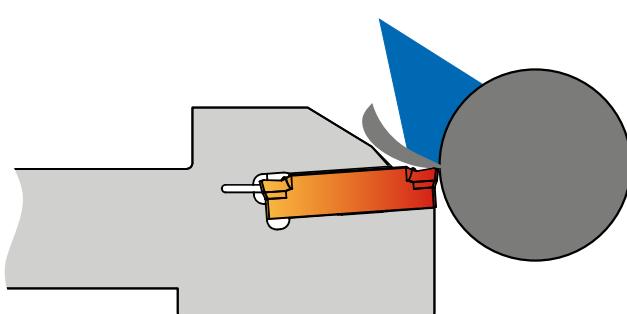

Risolve problemi legati allo sviluppo di elevate temperature sul tagliente

Ohne ACS – externe Kühlung

Without ACS – external coolant

Senza ACS – refrigerazione esterna

3

Mit dem ARNO-ACS cooling system® des SE- (Einstechen, Abstechen und Kopierdrehen) Programmes haben Sie ein Werkzeugsystem an der Hand, das gegenüber den Wettbewerbern herausragende Leistungen bietet. Als einziger Anbieter auf dem Zerspanungsmarkt, bekommen Sie bei ARNO® ein System, das den Kühlmittelstrahl direkt durch den Plattsitz leitet und so ohne Hindernisse direkt in die Schnittzone gelangt.

Vorteile:

- Höchste V_c und Vorschübe möglich
- Reduzierung der Aufbauschneidenbildung, Verringerung der Kammrissbildung durch die Vermeidung von Thermoschocks
- Kontrollierter Spanbruch
- Beste Oberflächenqualität
- Hervorragende Parallelität
- Alle Halter sind mit ihrer vernickelten Oberfläche bestens vor Korrosion geschützt
- Kein Aus- bzw. Einrichten der Kühlmitteldüsen notwendig – Reduzierung der Rüstzeit

Die zweiseitigen Schneidplatten sind für Werkzeuge mit ACS Innenkühlung in den Stechbreiten von 2 bis 6 mm und für Stechtiefen 12 und 21 mm erhältlich. Sieben Hartmetall-Sorten und sechs Spanleitstufen (teilweise bis 15° Schräge geschliffen) bieten Ihnen eine umfangreiche Auswahl für nahezu alle gängigen Werkstoffe.

Mit den passenden Abstechhaltern und Direktaufnahmen steht Ihnen ein durchgängig abgestimmtes Konzept von der Maschinenschnittstelle bis in die Schnittzone zur Verfügung.

With the ARNO-ACS cooling system® on the SE- (groove and groove turning) system we have a highly competitive solution against any competitor system. Unique to our ACS system, we offer through tool coolant directly and totally unhindered to the cutting edge.

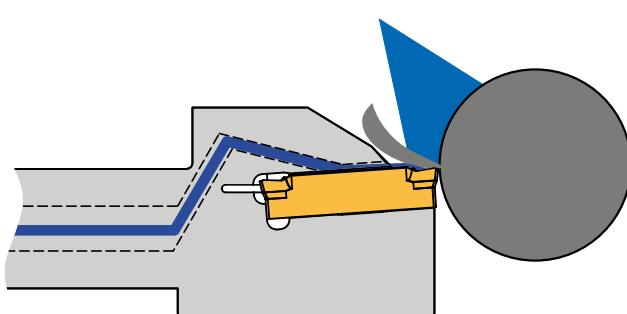

Advantages:

- Maximum speed and feed possible
- Reduction of build up edge and thermal cracking by avoiding thermal shocks
- Well controlled chip breaking
- Superb surface finish
- Excellent flatness
- All holders are nickel plated and therefore protected against corrosion
- Reduced set-up time as there is no requirement for adjusting coolant jet

Mit ACS – Kühlung durch Unterspülung

With ACS – coolant under the swarf

SPAN

CHIP

TRUCIOLO

WERKZEUG
TOOL
UTENSILE

The ACS cooling system is available for double sided inserts from groove width 2 to 6mm and groove depth to 12 and 21mm. By offering 6 carbide grades and 5 chip breakers (including inserts ground with a 15° angle) we offer a solution for nearly all materials.

With the correct tool and flange mounted holder you will get the maximum performance out of your machines capability.

Il Sistema ARNO-ACS Cooling System® applicato sulla linea prodotti SE (scanalatura e scanalatura di copiatura) garantisce soluzioni di utensili dalle massime prestazioni rispetto alla concorrenza. Una soluzione tecnica unica del suo genere che raggiunge con la massima precisione il tagliente senza ostacoli, garantendo la massima efficacia di raffreddamento nella zona di taglio.

Vantaggi:

- Massimi avanzamenti e velocità di taglio
- Riduzione della formazione del tagliente di riporto
- Riduzione dell'shock termico
- Migliorato controllo truciolo
- Migliorata formazione e rottura del truciolo
- Ottima finitura superficiale
- Eccellente planarità delle superfici
- Utensili nickelati resistenti alla corrosione
- Ridotti tempi di setup non avendo ugelli direzionabili

Il sistema ARNO-ACS Cooling System è disponibile con inserto bi-tagliente per larghezze di taglio da 2 a 6mm e per una profondità di 12 e 21 mm. Con 6 differenti gradi di metallo duro e 5 diverse geometrie di rompitruciolo (più varianti con angoli frontali fino a 15°) offriamo una soluzione alla lavorazione di tutti i materiali.

Con la giusta composizione di utensile ed attacco diretto sulla torretta si ottiene il sistema più rigido, compatto e performante per la desiderata operazione di taglio.

Handling: In Tabelle 1 den benötigten KMH-Werkzeughalter (VDI) und den Halter-Typ auswählen.

Entsprechend dem Halter-Typ den benötigten Monoblockhalter und die Schneidplatte mit Tabelle 2 bestimmen.

HANDLING: Please select the KMH holder (VDI) and holder type from table 1. According to holder type please select suitable monoblock holder and insert from table 2.

GUIDA ALLA LETTURA: Scegliere l'adattatore KMH (VDI) e tipologia di forma dalla tabella 1. Dalla tabella 2 scegliere il relativo utensile ed inserto.

* Der Halter kann um den Wert „V“ in der VDI-Aufnahme nach vorne geschoben werden.

Die Kühlmitteldüse ist innerhalb des Verstellwegs durch eine mechanische Begrenzung sichergestellt. Das „F“-Maß ändert sich entsprechend.

* The tool holder can be extended by dimension „V“ in the VDI holder.

The coolant supply is guaranteed within the adjustment range by a mechanical limitation. Dimension "F" changes accordingly.

* L'utensile può essere estratto dal portautensile del valore „V“ massimo.

L'adduzione del refrigerante è garantita tramite un fermo. Dimensione "F" cambia in relazione.

Ersatzteile wie Kühlmitteldüse und Schraube für Kühlmitteldüse finden Sie auf Seite 576 – 586

Spare parts like coolant jet and screw for coolant jet can be found on page 576 – 586

Ricambi come ugello refrigerante e vite per ugello refrigerante vedere pagina 576 – 586

Handling:

In Tabelle 1 den benötigten KMH-Werkzeughalter (VDI) und den Halter-Typ auswählen.

Entsprechend dem Halter-Typ den benötigten Monoblockhalter und die Schneidplatte mit Tabelle 2 bestimmen.

HANDLING:

Please select the KMH holder (VDI) and holder type from table 1. According to holder type please select suitable monoblock holder and insert from table 2.

GUIDA ALLA LETTURA: Scegliere l'adattatore KMH (VDI) e tipologia di forma dalla tabella 1. Dalla tabella 2 scegliere il relativo utensile ed inserito.

* Der Halter kann um den Wert „V“ in der VDI-Aufnahme nach vorne geschoben werden.

Die Kühlmitteldüse ist innerhalb des Verstellwegs durch eine mechanische Begrenzung sichergestellt. Das „AKL“-Maß ändert sich entsprechend.

* The tool holder can be extended by dimension „V“ in the VDI holder.

The coolant supply is guaranteed within the adjustment range by a mechanical limitation. Dimension "AKL" changes accordingly.

* L'utensile può essere estratto dal portautensile del valore „V“ massimo.

L'adduzione del refrigerante è garantita tramite un fermo. Dimensione "AKL" cambia in relazione.

Ersatzteile wie Kühlmitteldüse und Schraube für Kühlmitteldüse finden Sie auf Seite 588 – 595

Spare parts like coolant jet and screw for coolant jet can be found on page 588 – 595

Ricambi come ugello refrigerante e vite per ugello refrigerante vedere pagina 588 – 595

Allgemein / General /

Indicazioni di base

Grundsätzlich sollte darauf geachtet werden, dass das Stechwerkzeug so stabil wie möglich ausgewählt wird. Dadurch können Vibrationen verhindert und die Standzeit gesteigert werden.

Bei der Auswahl der Stechplatten ist zu beachten:

- Die Stechbreite EB in mm
- Die Geometrie für die Bearbeitung
- Der Eckenradius

Die Stechbreite sollte so schmal wie möglich und so breit wie nötig ausgewählt werden. Durch die Reduzierung der Stechbreite wird auch die Schnittkraft reduziert und kann in der Massenfertigung zudem auch zu enormen Einsparungen an Materialkosten führen. Nach Möglichkeit sind neutrale Schneiden einzusetzen, die eine bessere Spanbildung, geringere Abdrängkräfte und höhere Standzeiten erreichen.

Pay attention to selection of the correct tools. Tools should have minimum overhang to reduce vibrations and increase of tool life.

When selecting inserts, consider:

- Parting-off width in mm
- Chip breaker for the material
- Approach angle and corner radius

Select insert width as narrow as possible and as wide as necessary. By reducing the insert width, the cutting forces are reduced and especially important when mass producing less material is wasted. Whenever possible it is always recommended to use neutral inserts that offer better swarf control and tool life.

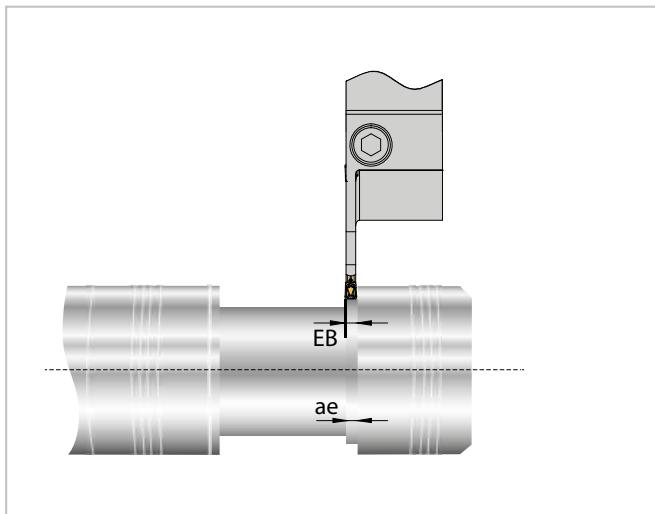

Scegliere sempre l'utensile più compatto possibile per una maggiore stabilità. Grazie a questo le vibrazioni vengono ridotte, la lavorazione è più stabile e la durata inserto aumentata.

Nella scelta dell'inserto di scanalatura è bene valutare:

- La larghezza di taglio in mm
- La forma di rompitruciolo
- L'angolo di taglio ed il raggio di punta

La larghezza della troncatura deve essere il più stretto possibile – scegliere inserti proporzionati alla misura da realizzare. Riducendo la larghezza di taglio, si riduce la forza di taglio e può risultare in un enorme risparmio dei costi delle

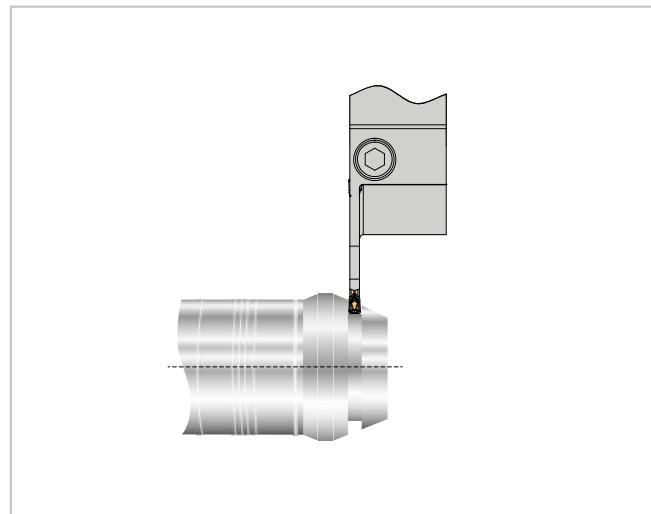

3

Hinweise zum Einstechen / Recommendations for grooving / Suggerimenti per la troncatura

Beim seitlich versetzten Einstechen sollte die Breite „ae“ mindestens 70 % der Stechbreite „EB“ betragen.

When grooving with an axial displacement the width "ae" should be a minimum of 70 % of the groove width "EB".

Per lavorazioni senza appoggio laterale assicurarsi che la larghezza di lavoro "ae" sia almeno il 70 % della larghezza inserto "EB".

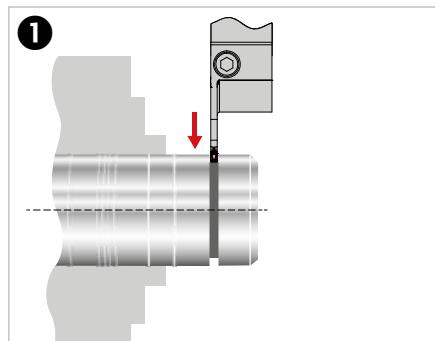

Beim Einstechen an schrägen Flächen muss der Vorschub beim Anschnitt um ca. 20 % bis 50 % reduziert werden.

When grooving into an angled surface reduce feed rate by 20 – 50 % until in full cut.

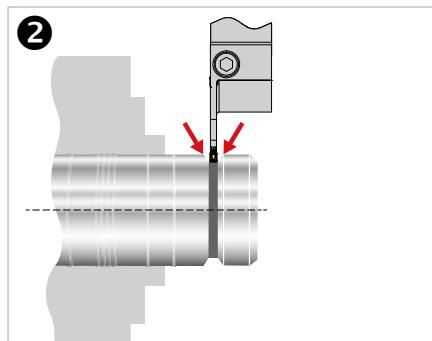

La scanalatura su superfici inclinate deve prevedere una riduzione dell'avanzamento tra il 20 % ed il 50 %.

Fasen und Abstechen / Chamfering and parting-off /

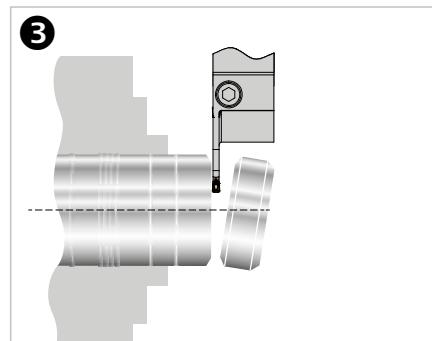

Sequenza per smussatura e troncatura

**1. Vorstechen**

1. Pre-grooving
1. Pre-scanaalatura

**2. Fasen**

2. Chamfering
2. Smusso

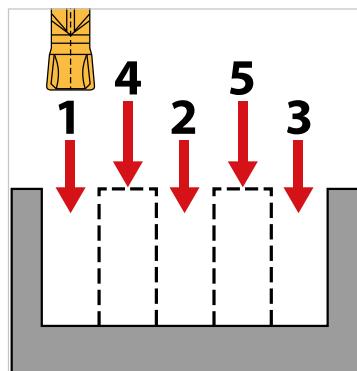

**3. Abstechen**

3. Parting-off
3. Troncatura

3

Mehrfacheinstechen*Multiple grooving*

Scanalatura a tuffo

Zuerst sind die vollen Nuten zu bearbeiten. Einstiche 1, 2 und 3. Danach werden die Stege 4 und 5 bearbeitet.

Dadurch werden die Eckenradien geschützt und die Späne in die Mitte des Spanbrechers abgeführt. Stegbreite 0,6 bis 0,8 x Stechbreite EB.

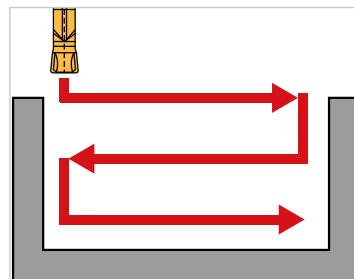

First the full grooves are machined. Grooves 1, 2 and 3, thereafter 4 and 5. This protects the corner radius and the swarf comes of the centre of the chip breaker. Widths of 4 and 5 should be 0.6 – 0.8 x parting-off width (EB).

Prima di procedere, valutare il tipo di gola e scegliere la dimensione inserto adatta per larghezza e profondità. Eseguire scanalature 1, 2 e 3; successivamente 4 e 5.

In tal modo l'inserto lavora con appoggio sui fianchi, in quelle successive senza appoggio ma solo sul rompitruciolo centrale. Prevedere profondità di gola ridotte e ripetere l'operazione fino alla massima profondità.

Stechdrehen*Groove turning*

Scanalatura di copiatura

Die Schnitttiefe a_p richtet sich nach der Stechbreite, dem zu zerspanenden Werkstoff und der Schneidkantenlänge bzw. Aufspansituation.

Faustformel:

$$a_p \text{ max.} = EB \times 0,7$$

$$a_p \text{ min.} = \text{Eckenradius } "R"$$

The groove depth (a_p) depends on the parting-off width, material and the edge length of the inserts.

General rule:

$$a_p \text{ max.} = EB \times 0,7$$

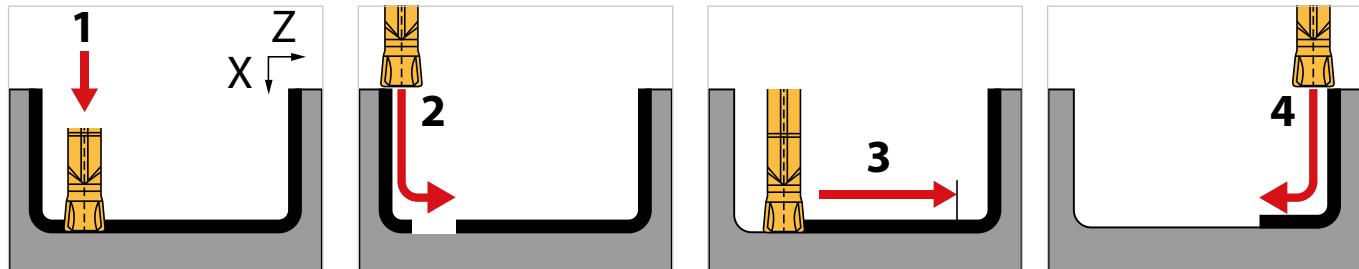

$$a_p \text{ min.} = \text{corner radius } "R"$$

La profondità di passata è determinata dalla larghezza di taglio dell'inserto, dalla tipologia di materiale e dalla lunghezza (stabilità) del portainserito.

Regola generale:

$$a_p \text{ max.} = EB \times 0,7$$

$$a_p \text{ min.} = \text{Raggio } "R"$$

Nut-Fertigbearbeitung / Groove finishing machining / Sequenza per la finitura di gole

3
Vorsicht ist geboten bei der Fertigbearbeitung, da die Schneidplatte um den Radiusbereich am Grund fährt und die meisten Bewegungen in der Z-Richtung erfolgen.

Dies führt zur Bildung dünner Späne und kann aufgrund von Vibrationen zur Behinderung des Prozesses führen.

Durch Einhaltung des dargestellten Bearbeitungsablaufes lässt sich dies verhindern, wobei die axiale und radiale Schnitttiefe zwischen 0,5 und 1,0 mm liegen muss.

Take care when finishing, the radius of the insert moves mainly in the z-axis and this can produce very thin swarf which can lead to vibrations and poor surface finish.

If using the machine path shown, this can be avoided, axial and radial cutting depth should be between 0.5 – 1.0 mm.

Il ciclo di finitura gola prevede una sequenza che eviti la formazione di anelli di bave. Scegliere forme di rompitruciolo con controllo truciolo anche per avanamento composti (copiatura) e non solo e non solo in Z come per tutti gli inserti di troncatura.

Evitare la formazione di trucioli sottili e lunghi e di vibrazioni.

La sequenza rappresentata indica il metodo suggerito di lavoro per una situazione tipo prevedendo profondità di passata tra 0,5 e 1,0 mm.
