MULTIFUNCTIONAL. ULTRA PROFITABLE.

**Turning and drilling with only one tool:
the SHARK-CUT multifunctional tool system from ARNO.**

Do you want to save space and money, produce faster and shorten set-up times? No problem with SHARK-CUT. This multi purpose tool lets you carry out turning and boring operations without changing the tool. You need fewer tool positions on the machine and you save space in the store. You reduce programming work and presetting time. The SHARK-CUT boring and turning system achieves high surface quality and reduces the number of operations required to finish the hole.

You are equipped for every requirement with three variants: Choose between SHARK-CUT Mini, which has inserts made of solid carbide starting at 4 mm diameter, and SHARK-CUT Standard, which has indexable inserts in various geometries starting at 8 mm diameter. For boring out and reaming operations, SHARK-CUT Rebore has two or three flutes with various indexable insert geometries and diameters from 12 or 24 mm. All variants benefit from optimised chip evacuation with the ARNO Coolant Booster, which is a special through tool coolant supply which has up to three coolant channels. For extra stability, all the larger versions have an axial location flat. It ensures that the SHARK-CUT reliably achieves the best results in every application.

VERSATILE BENEFITS

of the SHARK-CUT multifunctional tool system

Economical – lower tool costs and fewer machine positions

Fast – fewer tool changes and less programming work

High quality – flat bottom surface and high surface finish quality

Tool holders

- 3 variants for every diameter
- SHARK-CUT Mini – tool holder for solid carbide inserts:
Ø 4 to 8 mm, 2.25 x D and 4 x D
- SHARK-CUT Standard – tool holder for indexable inserts:
Ø 8 to 32 mm, 1.5 x D, 2.25 x D and 3 x D
- SHARK-CUT Rebore – tool holder for indexable inserts:
2 flutes starting at Ø 12 mm or 3 flutes starting at
Ø 24 mm, 2.25 x D in each case

Multifunctional

- Drilling into solid with flat bottom face
- Facing operations
- Turning internal profiles
- Turning external profiles

Inserts and indexable inserts

- Inserts made of solid carbide, coated and uncoated for SHARK-CUT Mini
- Indexable inserts in four geometries and twelve grades, coated and uncoated, peripherally ground and polished or sintered for SHARK-CUT Standard and Rebore
- Easy change of inserts with one screw

MULTIFUNZIONALE. MEGAVANTAGGIOSO.

**Foratura e tornitura con un unico utensile:
il sistema di utensili multifunzionali SHARK-CUT di ARNO.**

Desidera risparmiare spazio e denaro, produrre più velocemente e impiegare meno tempo nella lavorazione? Nessun problema con SHARK-CUT. Con questo sistema multifunzione è possibile eseguire operazioni di tornitura e foratura senza dover cambiare l'utensile. Così avrà bisogno di meno posti per gli utensili in macchina e potrà risparmiare spazio nel magazzino. In questo modo si riducono le spese per la programmazione e i tempi di attrezzaggio. Con l'utensile per foratura e tornitura SHARK-CUT è possibile ottenere elevate qualità superficiali e ridurre i costi della finitura della foratura.

Con le tre versioni Lei sarà attrezzato per affrontare ogni esigenza: Per la tornitura e la foratura è possibile scegliere tra SHARK-CUT Mini con inserti da taglio in metallo duro a partire da 4 mm e SHARK-CUT Standard con inserti in diverse geometrie a partire da 8 mm di diametro. Per l'alesaggio e la tornitura è disponibile SHARK-CUT Rebore a due o tre taglienti con diverse geometrie degli inserti a partire da un diametro di 12 o 24 mm. In tutte le varianti è possibile avvalersi di una ottimale evacuazione del truciolo grazie a ARNO Coolant-Booster, un particolare sistema di adduzione del refrigerante dotato di due o tre canali di raffreddamento. Per una stabilità ulteriore tutte le versioni più grandi dispongono di un impianto assiale. In questo modo SHARK-CUT vi consente di ottenere, per tutte le applicazioni, i migliori risultati.

MOLTEPLICI VANTAGGI

del sistema di utensili multifunzionali SHARK-CUT

Economico – costi utensili inferiori e meno posti
utensili occupati

Rapido - meno sostituzioni di utensili e spesa per la
programmazione contenuta

Alta qualità – fondo di foratura piano ed elevata
qualità di finitura

Corpi utensile

- Tre versioni per ogni diametro
- SHARK-CUT Mini - Utensile integrale in metallo duro:
Ø da 4 a 8 mm, 2,25 x D e 4 x D
- SHARK-CUT Standard – Utensile per inserti:
Ø da 8 a 32 mm, 1,5 x D, 2,25 x D e 3 x D
- SHARK-CUT Rebore – Utensile per inserti: a due taglienti,
a partire da Ø 12 mm oppure a tre taglienti a partire da
Ø 24 mm, entrambi 2,25 x D

Multifunzione

- Foratura dal pieno con fondo di foratura piano
- Barenatura a gradini
- Tornitura interna
- Tornitura di profili esterni

Inserti da taglio e inserti intercambiabili

- Inserti da taglio in metallo duro, rivestiti e non rivestiti per SHARK-CUT Mini
- Inserti in quattro geometrie e dodici qualità, rivestiti e non rivestiti, rettificati sul profilo e lucidati o sinterizzati per SHARK-CUT Standard e Rebore.
- Facile sostituzione degli inserti con una sola vite

MULTIFONCTION RENTABILITÉ MAXIMALE.

**Perçage et tournage avec un seul outil :
le système d'outils multifonction SHARK-CUT d'ARNO.**

Vous voulez gagner de l'espace et du temps, fabriquer plus vite et passer moins de temps à préparer ? Aucun problème avec SHARK-CUT. Ce système d'outil multifonction vous permet d'effectuer des opérations de tournage et de perçage sans devoir changer d'outil. Vous n'avez plus besoin d'autant d'emplacements pour les outils sur la machine et vous économisez de l'espace dans le magasin. Les efforts de programmation et les temps de préréglage sont considérablement réduits. Avec le système de perçage et de tournage SHARK-CUT, vous obtenez une finition de surface de haute qualité et vous réduisez la complexité de la finition du perçage.

Avec trois variantes, vous êtes paré pour faire face à chaque situation : Pour le tournage et le perçage, vous avez le choix entre le système SHARK-CUT Mini avec inserts de coupe en carbure monobloc à partir de 4 mm de diamètre et le système SHARK-CUT Standard avec plaquettes de coupe de différentes géométries à partir de 8 mm de diamètre. Pour l'alésage et le tournage, vous disposez du SHARK-CUT Rebore à deux ou trois tranchants avec une géométrie variable des plaquettes amovibles à partir d'un diamètre de 12 resp. de 24 mm. Pour toutes les variantes, profitez d'une évacuation optimale des copeaux grâce au Coolant-Booster d'ARNO, une alimentation spéciale en fluide de refroidissement avec jusqu'à trois canaux de refroidissement. Pour une stabilité complémentaire, tous les grands modèles disposent d'un support axial plan. Avec SHARK-CUT, vous obtenez ainsi les meilleurs résultats pour toutes les applications.

LES DIFFÉRENTS AVANTAGES

du système d'outils multifonction SHARK-CUT

Rentabilité – moins de frais d'outillage et moins d'emplacements occupés sur la machine

Rapidité – moins de changements d'outils et efforts de programmation moindres

Qualité élevée – forage plan et haute qualité de finition

Porte-outils

- 3 variantes pour chaque diamètre
- SHARK-CUT Mini - porte-outil pour inserts de coupe en carbure monobloc : Ø 4 à 8 mm, 2,25 x D et 4 x D
- SHARK-CUT Standard - porte-outil pour plaquettes amovibles : Ø 8 à 32 mm, 1,5 x D, 2,25 x D et 3 x D
- SHARK-CUT Rebores - porte-outil pour plaquettes de coupe amovibles : à deux tranchants à partir de Ø 12 mm ou à trois tranchants à partir de Ø 24 mm, chacun 2,25 x D

Inserts de coupe et plaquettes de coupe amovibles

- Inserts de coupe en carbure monobloc, avec et sans revêtement pour SHARK-CUT Mini
- Plaquettes amovibles en quatre géométries et douze variantes, revêtues ou non, rectifiées sur la périphérie et polies ou frittées pour SHARK-CUT Standard et Rebores
- Changement facile des plaquettes amovibles avec une seule vis

Multifonction

- Forage dans le plein à fond plat
- Tournage de contours plans
- Tournage de contours intérieurs
- Tournage de contours extérieurs

LONGER TOOL LIFE AND SHORTER SET-UP TIMES

Internal machining: 150% more tool life quantity and less handling effort.

SHARK-CUT not only ensures longer tool life quantities - in this example by an extra 150%. The system is designed for precision turning and drilling operations in internal machining and also simplifies work processes. SHARK-CUT saves you set-up time, insert changes and occupies fewer tool positions in the machine. A first-class efficiency tool.

AUMENTO DELLA DURATA DEGLI UTENSILI E RIDUZIONE DEI TEMPI DI ALLESTIMENTO

Lavorazione interna: 150% di durata in più e spesa ridotta per la movimentazione.

SHARK-CUT non solo garantisce durate maggiori – in questo esempio del 150% in più. Questo sistema per operazioni precise di tornitura e foratura nella lavorazione interna semplifica anche i processi di lavoro. Con SHARK-CUT si risparmiano tempi di allestimento, di sostituzione dell'inserto e si occupa un minor numero di alloggiamenti utensile nella macchina. Uno utensile efficiente di prima classe.

AUGMENTATION DE LA DURÉE DE VIE ET DIMINUTION DU TEMPS DE PRÉPARATION

Usinage intérieur : Augmentation de la quantité/durée de vie de 150 % et diminution des efforts de manipulation.

SHARK-CUT ne permet pas seulement une quantité/durée de vie plus élevées - dans cet exemple, une augmentation de 150 %. Ce système pour des opérations de tournage et de perçage précises lors de l'usinage intérieur simplifie également les processus de travail. Avec SHARK-CUT, vous économisez du temps de préparation, des changements de plaques et vous occupez moins d'emplacements d'outils dans la machine. Un outil d'efficacité de première qualité.

The recommended cutting data are only approximate values.
It may be necessary to adjust them to each individual machining application.
HC = Carbide coated
HU = Carbide uncoated

Absolute precision, excellent surface quality and longer tool life are achieved due to the high modulus of elasticity and density. This greatly reduces vibrations.

Estrema precisione con eccellente finitura superficiale e durate crescenti vengono ottenute grazie a un modulo elastico e a elevata densità, che hanno un effetto di smorzamento delle oscillazioni.

Une précision maximale avec des finitions de surface remarquables et une durée de vie augmentée sont obtenues grâce au module de Young et à la densité élevés, ces derniers amortissant particulièrement bien les vibrations.

COOLANT-BOOSTER

Coolant pressure

The SHARK-CUT tool offers a unique solution when it comes to coolant supply to improve chip evacuation out of the bored hole. A “return” coolant jet (in the reverse flute direction) ensures enhanced chip evacuation. The coolant pressure is therefore approx. 1.5 – 3 bar (ideally 5 – 7 bar).

Pressione del refrigerante

Questa soluzione innovativa in dettaglio SHARK-CUT offre una speciale adduzione del liquido refrigerante per una asportazione migliore dei trucioli da foratura. Un getto di refrigerante rivolto all'indietro garantisce il trasporto ottimizzato dei trucioli. Indipendentemente dal diametro, la pressione del refrigerante deve per questo essere di circa 1,5 – 3 bar (ottimale 5 – 7 bar).

Pression de liquide de refroidissement

Le SHARK-CUT, en tant que solution innovante, offre une arrivée de liquide de refroidissement spécifique pour une meilleure évacuation des copeaux du perçage. Un jet de liquide de refroidissement distinct dirigé vers l'arrière optimise l'évacuation des copeaux. Pour cela, la pression de liquide de refroidissement doit être d'environ 1,5 à 3 bar (idéalement 5 à 7 bar), indépendamment du diamètre.

The matching specially designed designs of the tool and insert permits off-centre drilling. This allows deviations in tool diameter.

Grazie ai modelli appositamente sviluppati e coordinati dell'utensile e dell'inserto è possibile effettuare la foratura fuori centro. In questo modo possono essere raggiunti scostamenti dal diametro dell'utensile.

La conception spécialement développée et coordonnée de l'outil et de la plaquette de coupe amovible permet de réaliser le forage excentré. On peut ainsi obtenir des écarts par rapport au diamètre de l'outil.

WIPER GEOMETRY – FUNCTION PRINCIPLE (BENEFITS)**GEOMETRIA WIPER – PRINCIPIO DI FUNZIONAMENTO (BENEFICI)****GÉOMÉTRIE WIPER – PRINCIPE DE FONCTIONNEMENT (BÉNÉFICES)****Better surface quality**

At the same feed rate the indexable insert with WIPER insert achieves a R_a value that is much better than a conventional indexable insert.

Superficie migliore

Con pari avanzamento, l'inserto con tagliente WIPER raggiunge un valore R_a di gran lunga migliore rispetto a un inserto tradizionale.

Meilleur qualité de l'état de surface

À vitesse égale, la plaquette de coupe amovible avec plat WIPER obtient une valeur R_a bien supérieure à celle obtenue par une plaquette de coupe amovible traditionnelle.

**Shorter machine time**

If the same R_a value is to be achieved as with a standard indexable insert, the insert with a WIPER flute is capable at operating at twice the feed rate, thereby reducing machine time.

Tempo di lavorazione ridotto

Se si deve ottenere lo stesso valore R_a di un inserto standard, grazie all'inserto con tagliente WIPER è possibile utilizzare un avanzamento doppio (= tempi di lavorazione pezzetti ridotti!).

Temps d'usinage réduit

S'il faut atteindre la même valeur R_a qu'avec une plaquette de coupe amovible standard, la plaquette de coupe avec plat WIPER permet d'utiliser à une avance deux fois plus élevée (= durée d'usinage réduite !).

MACHINING OVER CENTRE

USINAGE AU-DELÀ DU CENTRE

Situation / Situazione / Situation

If machine travel over the centre is insufficient, the outside diameter cannot be machined with the same tool.

Se la corsa della macchina sull'asse cen-trale è insufficiente, il diametro esterno non può essere lavorato con lo stesso utensile.

Si le déplacement de la machine au-dessus de l'axe central est insuffi-sant, le diamètre extérieur ne peut pas être usiné avec le même outil.

Solution / Soluzione / Solution

Use of a right-hand SHARK-CUT tool.

Utilizzo di un utensile SHARK-CUT destro.

Utiliser le bon outil SHARK-CUT.

THROUGH HOLE DRILLING

FORO PASSANTE

PERÇAGE TRAVERSANT

2

Note

When through holes are drilled with a stationary tool and a rotating workpiece, a sharp-edged disc is pro-duced. Please ensure adequate safety precautions.

The coolant pressure for SHARK-CUT 2.25 x D should be approx. 5–7 bar and approx. 1.5–3 bar for SHARK-CUT 1.5 x D. If the required coolant pressure is not available on the machine, it may be beneficial to inter-rupt the drilling operation briefly to evacuate the hole.

Nota

Con l'utensile fisso e il pezzo in lavorazione rotante nei fori passanti si produce un bordo tagliente. Adottare le oppor-tune misure di sicurezza.

La pressione del refrigerante per SHARK-CUT 2,25 x D dovrebbe essere di ca. 5–7 bar e di ca. 1,5–3 bar per SHARK-CUT 1,5 x D. Se sul lato macchina non è presente la pressione del refrigerante necessaria, può essere utile interrompere brevemente il procedimento di foratura per poter svuotare il foro.

Remarque

Si l'outil est à l'arrêt et si la pièce tourne, dans le cas de perçage traversant, une rondelle tranchante tombe, il faut prendre des mesures de sécurité.

La pression de liquide de refroidissement doit être d'env. 5 à 7 bar pour le SHARK-CUT 2,25 x D et d'env. 1,5 à 3 bar pour le SHARK-CUT 1,5 x D. Si la machine ne permet pas d'obtenir la pression de liquide de refroidissement nécessaire, il peut être judicieux d'inter-rompre brièvement l'opération de perçage pour vider le trou.

DRILLING DEPTHS UP TO 3 X D

PROFONDITÀ DI FORATURA FINO A 3 X D

PROFONDEURS DE TROU JUSQU'À 3 X D

With SHARK-CUT tools SC..1,5 x D, drilling depths up to three times the nominal diameter are achievable with a corresponding workpiece contour (see Figure). Not the work steps 1, 2 and 3. Use right-hand and left-hand indexable inserts for tools with a diameter of 8 mm. Use neutral indexable inserts for tools with diameters ranging from 10 to 32 mm.

Con gli utensili SHARK-CUT SC..1,5 x D con un corrispondente profilo dell'utensile è possibile ottenere profondità di foratura fino al triplo del diametro nominale (vedere immagine). A tale proposito è necessario attenersi alla sequenza operativa 1,2 e 3. Per utensili con diametro di 8 mm sono necessari inserti destri e sinistri. Per utensili con diametro da 10 a 32 mm vengono utilizzati inserti neutri.

Les outils SHARK-CUT SC..1,5 x D permettent d'obtenir, à contour de pièce correspondant, des profondeurs de trou jusqu'à trois fois le diamètre nominal (voir illustration). À cet effet, il convient de respecter la séquence des opérations 1, 2 et 3. Pour les outils dont le diamètre mesure 8 mm, des plaquettes de coupe amovibles droites et gauches sont nécessaires. Pour les outils dont le diamètre mesure 10 à 32 mm, des plaquettes de coupe amovibles neutres sont utilisées.
